

I am extremely worried that there will be Universal Service Fund (USF) fees associated with Wireless Internet. This will put cost pressures on the service providers and they will need to raise prices. This WILL have the effect of these carriers losing customers and needing to shut down. Then the very thing that USF was created for will have the reverse effect. I'm also worried that lobbyist are controlling this issue. I will not vote for anyone in government that allows lobbyists to control their stance on issues. Please make the decision based on what is best for the rural communities. The ILECs will not be there for them.
